Commercial & Product KPIs

This dashboard answers five questions about the business: how many customers we have, what an average contract is worth, how well we keep users, how deals move through the sales pipeline, and how quickly new organisations get value from the product. Commercial figures come from HubSpot deals and companies; product figures come from backend usage events. Use the sidebar to pick the currency and decide which company statuses count as a customer.

Source: dbt models in FLINN_DB. Product data through 08 Feb 2026.

Settings in this view: amounts in EUR; customers are companies with status Active Customer.

Overview

The headline answer to each question. Open the other tabs for the breakdown behind each number.

Q1
Customers today
26
of 253 companies in HubSpot

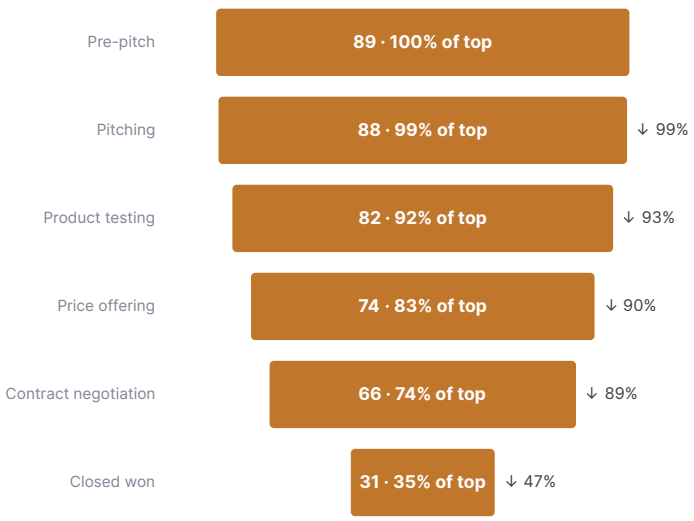

Q2
Estimated ACV (new business)
€13.5k
Assumes annual licences. Average won deal overall: €12,967.74

Q3
Month-1 retention
98.6%
Month 3: 95.9% · Month 6: 95.0%

Q4
Win rate
45.6%
Won ÷ closed deals · median cycle 98 days

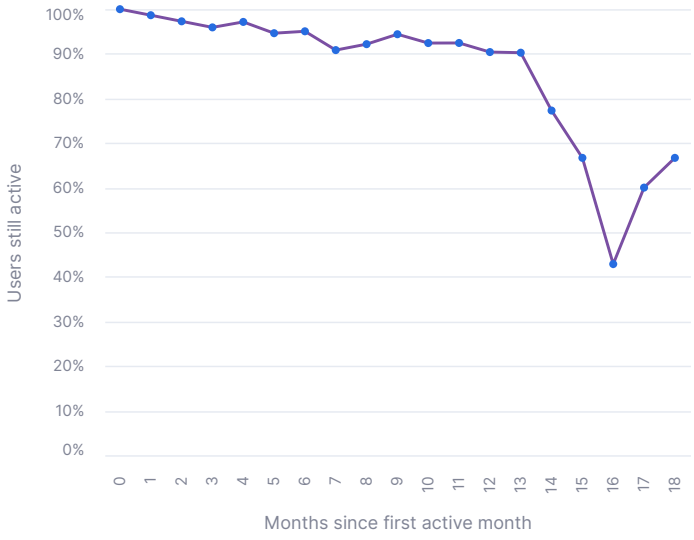

Q5
Median time to first value
40.7 h
78.4% activate within 7 days

Sales funnel

How to read: Each bar is a pipeline stage, from the first stage at the top to Closed won at the bottom. The bar width and the number inside show how many deals reached that stage and what share of the top stage that is. The percentage next to each bar is the conversion from the stage above; the biggest drop shows where deals get stuck.

User retention curve

How to read: The line shows the share of users still active each month after their first active month, averaged across cohorts and weighted by cohort size. Month 0 is the first active month, so it is always 100%. A steep early drop that then flattens is normal; the level where the line flattens is the share of users you keep long term.

Customers

How many customers do we have today? Counts HubSpot companies whose customer status is selected in the sidebar, and shows where they sit by industry and country and which have open expansion deals.

Customers today
26
Active Customer

Customers with an open expansion deal
5
19.2% of customers

Companies with open new-business deals
15
Potential new customers

Companies with a won-then-lost deal
2
Churn signal

Companies by status

Lead
175
Not counted as customer, 69.2% of companies

Churned-Lost
35
Not counted as customer, 13.8% of companies

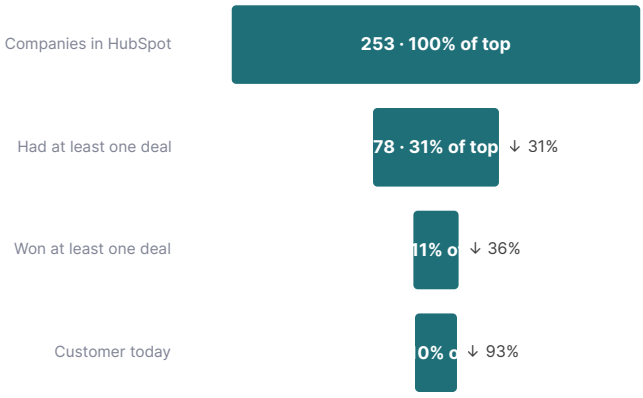

Active Customer
26
Counted as customer, 10.3% of companies

Open New Business
15
Not counted as customer, 5.9% of companies

Passive Churned
2
Not counted as customer, 0.8% of companies

How to read: One tile per HubSpot customer status, showing how many companies have that status. Coloured tiles are the statuses counted as customers today; grey tiles are not counted.

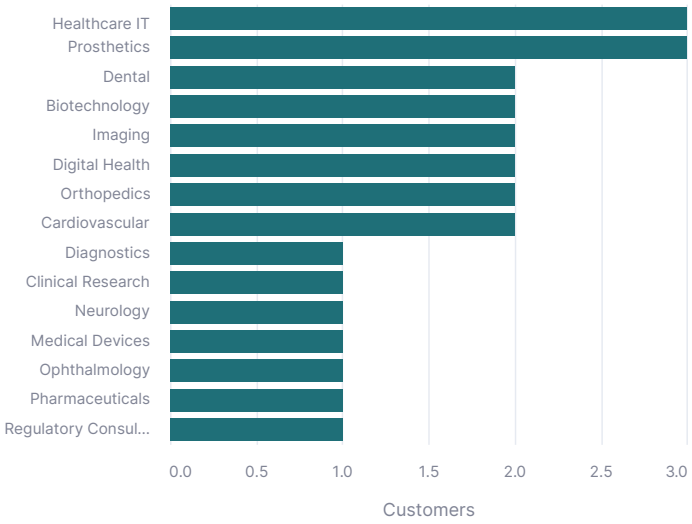

From company to customer

How to read: Each bar is a step from being a company in HubSpot to being a customer today. The number inside shows how many companies reached that step and their share of all companies; the percentage next to each bar is the share of the step above that made it. A drop between won and customer today means companies that bought once but are no longer customers.

Break customers down by

Industry Country

How to read: Bars rank the top 15 industries or countries by number of customers; a longer bar means more customers. Use the toggle above to switch between industry and country.

Customer list

COMPANY_NAME	DOMAIN	INDUSTRY	COUNTRY	CUSTOMER_STATUS	WON_DEALS	OPEN_DEALS	OPEN_EXPANSION_DEA
BioVance d.o.o.	biovance.com	Healthcare IT	Germany	Active Customer	2	0	
HealthBridge S.r.l.	healthbridge.com	Diagnostics	United Kingdom	Active Customer	2	0	
NovaScan ApS	novascan.co	Pharmaceuticals	Switzerland	Active Customer	2	0	
ZenithBio Oy	zenithbio.co	Regulatory Consulting	Germany	Active Customer	2	0	
OrthoGen S.r.l.	orthogen.eu	Cardiovascular	Poland	Active Customer	2	0	
Acumed ApS	acumed.com	Dental	Switzerland	Active Customer	1	1	
EvoMed SAS	evomed.co	Medical Devices	Norway	Active Customer	1	0	
MedCore SE	medcore.co	Prosthetics	United Kingdom	Active Customer	1	0	
DentalPro GmbH	dentalpro.co	Healthcare IT	United Kingdom	Active Customer	1	1	
ClearPath S.A.	clearpath.com	Dental	Sweden	Active Customer	1	0	

Contract value

What is our Average Contract Value (ACV)? ACV means *annual* contract value, which is not automatically the same as the average deal value. The data has no contract-duration field, so the estimated ACV uses new-business deals and assumes each is an annual licence.

Estimated new-business ACV
€13,538.46
If new-business deals are annual licences

Average won deal value, all deals
€12,967.74
€402.0k ÷ 31 won deals

Average won deal value, new business
€13,538.46
26 deals

Average won deal value, existing business
€10,000.00
5 deals

Total won value
€402.0k

Won deals
31

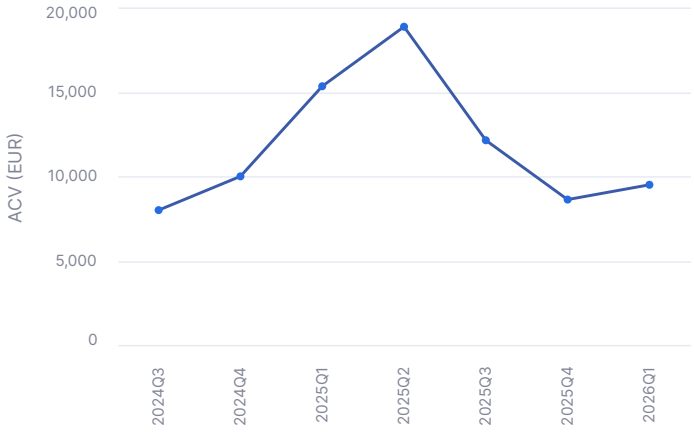

Deal size range
€5,000 – €50.0k

ACV by deal type

How to read: Each bar is the average value of a won deal of that type. Compare bar lengths to see which kind of deal brings in larger contracts. Hover to see how many deals sit behind each average; an average built on only a few deals can swing a lot.

ACV trend by close quarter

How to read: Each point is the average value of deals won in that quarter. A rising line means newer contracts are larger. Hover to see how many deals closed in the quarter; quarters with only a few deals are noisy.

DEAL_TYPE	CURRENCY	WON_DEALS	TOTAL_WON_VALUE	AVERAGE_DEAL_VALUE	MIN_DEAL_VALUE	MAX_DEAL_VALUE
newbusiness	EUR	26	352000	13538.4615	5000	50000
existing_business	EUR	5	50000	10000	5000	15000

▾ How ACV is calculated

ACV = total value of closed-won deals ÷ number of closed-won deals, per currency. This assumes the HubSpot deal **amount is an annual value**. If deals carry multi-year totals, divide by contract length in years before averaging.

Retention

What is the retention of our users? Users are grouped by the month of their first product use. The curve shows the share of users still active in each following month, averaged across those cohorts.

Month-1 retention
98.6%
17 cohorts

Month-3 retention
95.9%
16 cohorts

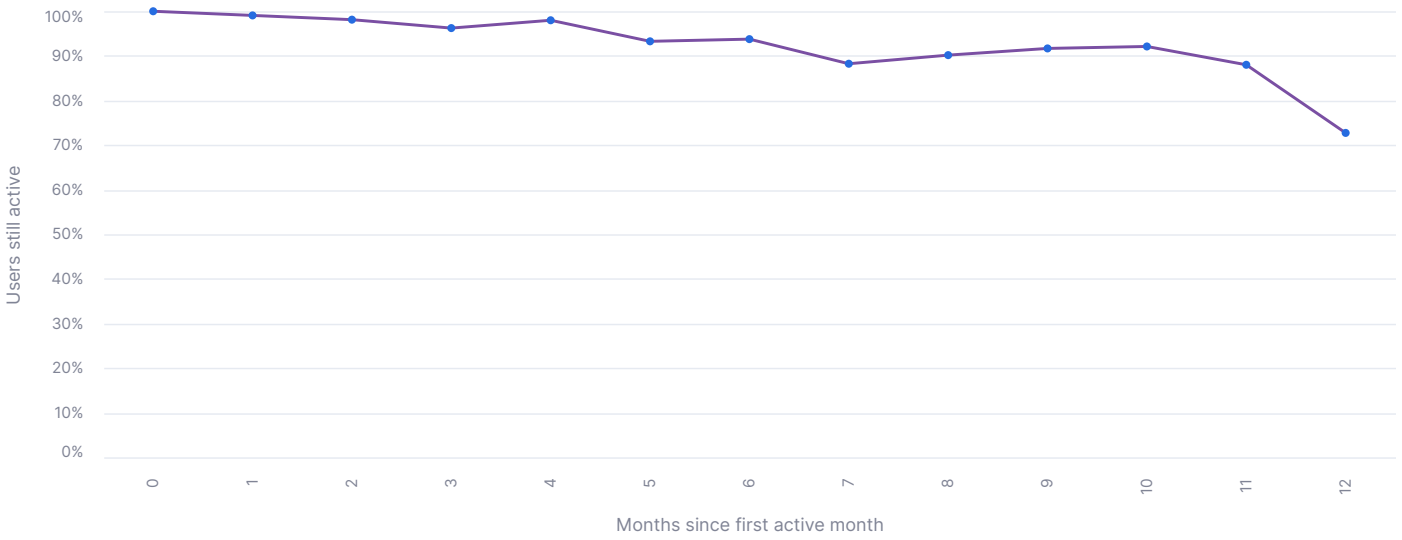

Month-6 retention
95.0%
13 cohorts

Users in tracked cohorts
150
18 monthly cohorts

Cohorts to show

12

Average retention curve

How to read: The line shows the share of users still active each month after their first active month, averaged across cohorts and weighted by cohort size. Month 0 is the first active month, so it is always 100%. A steep early drop that then flattens is normal; the level where the line flattens is the share of users you keep long term.

▾ How retention is calculated

Retention in month *k* = active users in month *k* ÷ cohort size. Headline figures are weighted by cohort size and only include cohorts old enough to have reached month *k*, so young cohorts don't drag the average down. The latest activity month may be partial.

Sales funnel

How does our sales funnel convert? How many deals reach each pipeline stage, the conversion from one stage to the next, and the stage where lost deals dropped out. Filter by pipeline, deal type and creation date.

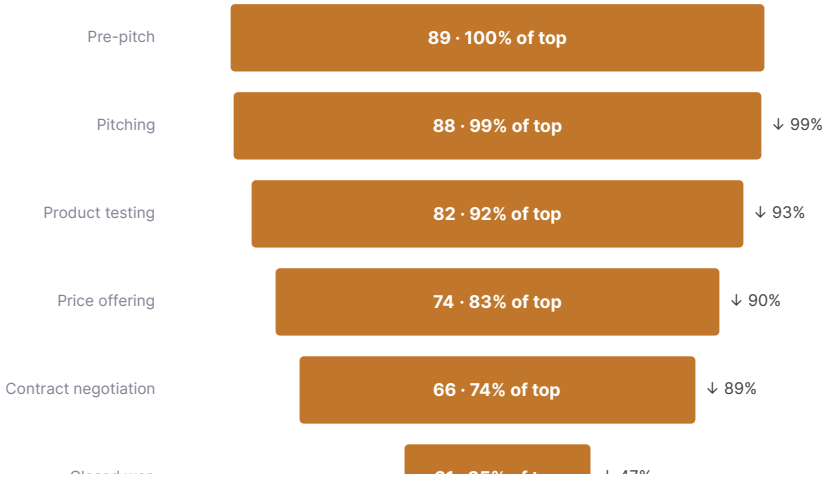

Pipeline: Sales Pipeline ×

Deal type: existing_business × newbusiness ×

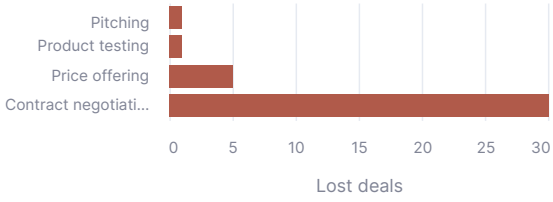

Deal created between: 2024/05/06 – 2026/01/15

Deals in view	Win rate	Median sales cycle	Open pipeline
89	45.6%	98 days	€275.0k
21 still open	Won ÷ (won + lost)	Won deals, created → closed	Open deals in EUR

Stage funnel

Where lost deals dropped out

How to read: Each bar counts lost deals by the furthest stage they reached before they were lost. A long bar at a late stage means deals fall through after a lot of sales effort; a long bar at an early stage points to weak qualification or poor fit.

How to read: Each bar is a pipeline stage, from the first stage at the top to Closed won at the bottom. The bar width and the number inside show how many deals reached that stage and what share of the top stage that is. The percentage next to each bar is the conversion from the stage above; the biggest drop shows where deals get stuck.

STAGE	DEALS	PCT_OF_TOP	STEP_CONVERSION
Pre-pitch	89	100.0%	None
Pitching	88	98.9%	98.9%
Product testing	82	92.1%	93.2%
Price offering	74	83.1%	90.2%
Contract negotiation	66	74.2%	89.2%
Closed won	31	34.8%	47.0%

▾ How the funnel is calculated

A deal counts as having reached a stage if it has that stage's entry timestamp **or any later one** — HubSpot lets reps skip stages, so this keeps the funnel monotonic. Lost deals count up to the furthest stage they reached. Closed won counts deals that are won today, so it matches the won-deal count used for ACV and win rate; deals moved out of Closed won after reaching it are not counted there. Win rate ignores open deals.

Time to first value

How fast do new organisations reach first value? Time to first value (TTFV) is the time from an organisation's signup to its first search. Shows how long activation takes and whether it is getting faster.

Median time to first value
40.7 h
Signup → first search, activated orgs

Activated within 7 days
78.4%
37 eligible orgs

Activated within 30 days
86.1%
36 eligible orgs

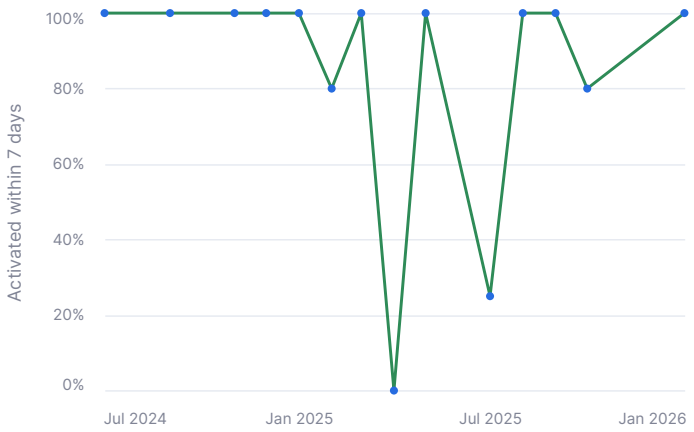

Activated overall
100.0%
37 of 37 orgs

How long activation takes

How to read: Each bar counts activated organisations by how long they took from signup to their first search. Bars on the left mean fast activation; a long tail on the right points to onboarding friction. Organisations that never ran a search are not included here.

7-day activation by signup month

How to read: Each point is the share of organisations that signed up in that month and ran their first search within 7 days. A rising line means onboarding is getting faster. Hover to see how many organisations sit behind each point.

▾ How TTFV is calculated

Time to first value = hours from organisation creation to its first search. The 7- and 30-day rates only include organisations created at least 7 / 30 days before the data end date, so recent signups don't look artificially unactivated.
